Chapter 1 Introduction & Key Findings

Women in the Tech Industry

Technology touches all areas of business today.

Departments such as HR, finance, marketing and customer service increasingly demand technical acumen, software expertise and data insights - alongside non-technical industry knowledge, experience and skills.

And yet, women are under-represented across both technical and non-technical functions. Globally, only one out of six developers is female, while women currently make up only 30% of the 7 million people working in Europe's digital sector.

As technology is one of the key drivers of social and economic change today, the strong under-representation of women in tech threatens to deepen the social divide and strengthen gender stereotypes. Now more than ever we need positive female role models and an industry culture that supports and celebrates female talent.

“Technology companies need more women with tech backgrounds, but they also need more women across other critical functions like marketing and finance. More women in non-technical roles can help drive and engage women in technical roles too - diversity extends beyond functional siloes.”

Gillian Tans
Chief Executive Officer
Booking.com

The Research

The following is a unique perception audit of women working in the tech industry, in non-technical roles.

Commissioned by Booking.com, its objective was to better understand how these critical individuals perceive the industry and how they can progress in their career within the growing technology sector.

Non-tech roles account for the majority of jobs in technology companies, so listening to and uncovering insights from women working in these roles is critical to achieving effective solutions that drive change and promote diversity in the technology sector as a whole.

Key Findings

#1

Women enjoy the culture of the tech industry

Non-tech women think working in technology is great, allowing freedom to innovate (81%), a fast pace (70%) and flexible working hours (78%). They find it dynamic, creative and innovative. Six out of 10 (61%) believe it is less hierarchical compared to other industries.

#2

But it also has its flaws

3 in 10 women agree it is male-dominated and 1 in 10 thinks it is sexist. 42% of women say that gender bias in the industry is worse than they thought it would be.

#3

1 woman in 2 feels treated differently in the workplace

Women feel less respected in the workplace, either because they are a woman (48%) or because they are in a non-tech role (42%)

#4

Over half think there aren't enough women in senior leadership positions

And addressing the imbalance is thought to be an opportunity both for the business and the work culture. Women think that hiring more women would improve the business performance (57%) and company reputation (61%), and improve the overall work environment (68%), encouraging non-tech women to make the switch.

Key Findings

#5

Change needs to come from the industry and employers

There's a big gap between what women want to feel supported vs what companies are actually doing to support their growth. Over one in three (34%) say a mentorship program would help them progress their career, but only 20% say their company does it.

#6

An industry shift

The problem of gender inequality needs to be taken seriously by the industry as a whole. Currently only one in two women thinks that gender diversity is a top priority for the industry overall.

#7

The company's role

92% of women say knowing their employer values women as much as men would inspire them to progress in their career, but only 46% think it is actually a top priority for their company.

#8

The importance of a role model

Over 90% are inspired by seeing female leaders and role models.

Chapter 2

The benefits and barriers for women working in tech

Women enjoy the culture of the tech industry

Women like the freedom to innovate and the flexible working hours that the tech industry presents.

They find the tech industry to be creative, dynamic and innovative but not inclusive nor nurturing

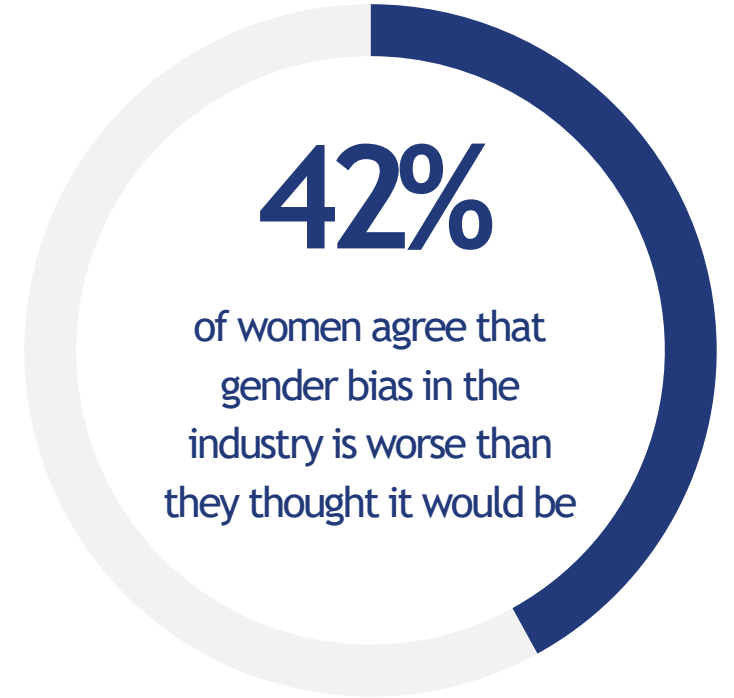

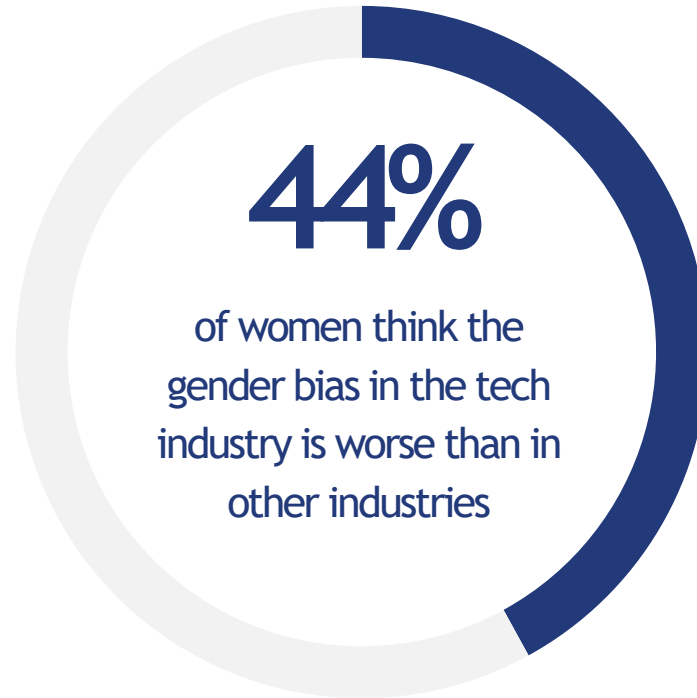

Positive

- 34% describe it as diverse
- 18% describe it as inclusive
- 16% describe it as nurturing

Negative

- 14% describe it as cut-throat
- 8% describe it as conservative

They feel gender bias is worse in tech than in other industries. **Worse than they thought it would be.**

THIS GETS WORSE THE MORE SENIOR YOU ARE IN THE COMPANY
